Forecast for Saturday 09 Sep 2023

Weather: A mixed start to the day, with mist and shallow fog in some valleys. Any mist and fog will soon clear leading to another very warm and humid day with light winds. Some various amounts of mid-level cloud will develop through the day, bringing a slight chance of a heavy afternoon shower or thunderstorm, which would fade away this evening.

Chance of cloud-free hill tops above 600m: 90% initially but generally 95% or more after sunrise.

Low cloud and visibility: Poor in areas of mist and fog around dawn, soon clearing. Good after sunrise, with uninterrupted panoramic views, although these will be hazy.

Forecast for Sunday 10 Sep 2023

Weather: Low confidence in detail surrounding heavy and potentially thundery showers. Another very warm start and largely clear start, with perhaps some temporary valley mist and fog. Then later in the night mid-level cloud is expected to increase, bringing an increasing chance of heavy showers or thunderstorms arriving from the south through the morning, and localised downpours. From mid-afternoon showers or thunderstorms are likely to start fading away, leaving a dry and sunny evening and then clear start to the night.

Maximum wind: Southerly 10mph but possibly up to 15-20mph with gusts 25-30mph under heavy showers.

Chance of cloud-free hill tops 600m: Near 100% but possibly falling to 60% late in the day.

Low cloud and visibility: Generally good and certainly less hazy than recent days, though moderate at times under showers. Perhaps becoming mediocre in places during the evening, with cloud base as low as 600m.

Temperature: **Valleys:** Plus 20 becoming 26 degrees Celsius.
At 600m: Plus 15 increasing to plus 20 degree Celsius.
Freezing level: Well above summits.
